Table of Contents

- 1. About Small Office Security 1**
- 2. Resolved Issues 3**
 - 2.1. Control Center 3
- 3. Upgrade Instructions 4**

1. About Small Office Security

Small Office Security on-premise allows organizations to host security in their own infrastructure and easily deploy, administer and monitor protection for PC and Mac desktops and file servers, featuring leading antimalware detection as well as the latest administration console developed by Bitdefender.

Unlike the cloud-managed version which is hosted by Bitdefender and requires no onsite infrastructure, the Small Office Security version is deployed in the customer's own environment.

Small Office Security includes the following components:

- [Control Center](#)
- [Security for Endpoints](#)
- [Security for Mobile Devices](#)

Control Center

A web-based dashboard and unified management console that provides full visibility into organization's overall security posture, global security threats, and control over its security services that protects desktops and servers.

Control Center integrates with the existing system management and monitoring systems to make it simple to automatically apply protection to unmanaged desktops and servers.

Security for Endpoints

Bitdefender Security for Endpoints unobtrusively protects computers by using number-one-ranked antimalware technology combined with firewall, intrusion detection, web access control and filtering, sensitive data protection and application control. Security for Endpoints offers protection for computers and laptops running on Windows and Mac OS X operating systems and Windows servers. Employee productivity is ensured with low resource consumption, optimized system scanning and automated security that requires no end-user interaction.

Security for Mobile Devices

Manages and controls iPhone, iPad and Android devices with a unified enterprise-grade management that keeps the device safe with real-time scanning and enforces organization's security policies on mobile devices to lock screen, require authentication, encrypt removable

media, locate lost devices and deny non-compliant or jailbroken devices accessing corporate services.

2. Resolved Issues

2.1. Control Center

- The number of used license slots was incorrectly displayed in Control Center. This issue is now fixed.
- In certain situations, protected endpoints did not receive their license key and appeared expired in Control Center. This issue is now fixed.
- In certain conditions, after adding a new Security for Endpoints license key, some of the licensed endpoints appeared expired in Control Center. This issue is now fixed.

3. Upgrade Instructions

You can download and install the product update from Control Center console. After the upgrade is over, the current version of Small Office Security will be 5.1.9.427.

To upgrade your Small Office Security appliance and components to the latest version:

1. Log in to Control Center web console using and user account with Manage Solution rights.
2. Go to **Configuration > Update > Product Update** page.
3. Under **Small Office Security Update** section, start the automatic upgrade of the Small Office Security deployment by clicking the **Update Now** button. Wait for the upgrade to complete.
4. Under **Component Update** section, select the products with a newer available version.
5. Click the  **Update** button at the right side of the table. The selected component will be downloaded / updated. Refresh the table contents and check the corresponding status.
