SMALL OFFICE SECURITY

Proactive security and management

BitDefender Small Office Security is a robust and easy to use business security and management solution, which delivers superior proactive protection from viruses, spyware, rootkits, spam, phishing and other malware.

BitDefender Small Office Security enhances business productivity and reduces management and malware-related costs by enabling the centralized administration, protection* and control of workstations and of the file traffic inside companies' networks.

KEY FEATURES

- Automation of routine management activities and event response** through security policies
- Supports the centralized management of workstations and file servers
- Antivirus, antispyware, antirootkit, firewall, antispam, antiphishing, privacy and user control for workstations and file servers*
- Automatic detection and deployment on new workstations
- Proactive heuristic protection against zero-day threats
- Centralized and detailed reports
- Extensive WMI script support

KEY BENEFITS

- Reduced administration workload and costs
- Increased security for corporate computer users
- Safe sharing of files and documents
- Improved network visibility
- Increased usability
- Optimized for business environments

User Control & Local backup	•		
Centralized Management	•	•	•
Platform	Windows	Windows	Linux, FreeBSD

* To find out more about protection types and centralized management at workstation/server level please refer to the table above

** Available in spring 2008

BitDefender Technologies

b-have All BitDefender solutions include B-HAVE, a patent pending technology which analyzes the behavior of potentially malicious codes inside a virtual computer, eliminating false positives and significantly increasing detection rates for new and unknown malware.

NEUNET To better deal with new spam, the BitDefender Lab has created NeuNet, a powerful antispam filter. Inside the Antispam Lab, NeuNet is pretrained on a series of spam messages so that it learns to recognize new spam by perceiving its similarities with the messages it has already examined.

Certified Antivirus Engines BitDefender's award-winning scan engines featuring the B-HAVE technology have been recognized by leading certification bodies, including ICSA Labs, Virus Bulletin, West Coast Labs, for their unmatched proactive antimalware protection.

Services

Advanced Update System

The BitDefender Small Office Security components receive the latest updates and patches based on three configurable technologies: on-demand, scheduled and automatic.

Upgrades

Registered users benefit from free upgrades to any new version of the solution during the license period. Special pricing is always provided to our customers when they renew their license, making BitDefender a long term cost effective solution.

Free 24/7 Professional Technical Support

Certified representatives provide BitDefender business customers with free permanent support online, by telephone or e-mail. This is supplemented by an online database with answers to Frequently Asked Questions and fixes for common issues.

BitDefender Small Office Security

BitDefender Client Security

BitDefender Client Security is a robust and easy to use business security and management solution based on two major components:

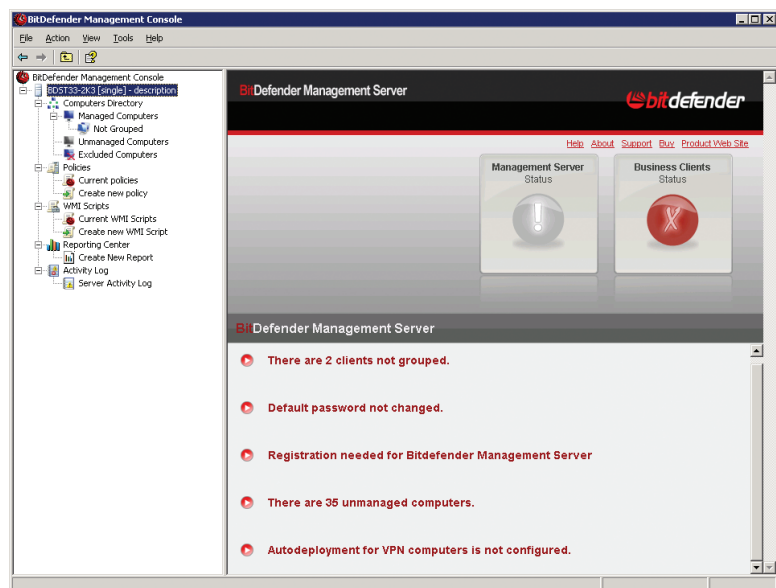

- **BitDefender Business Client**
 - once installed on the company's workstations, it provides industry leading proactive protection against viruses, spyware, rootkits, spam, phishing and other malware.
- **BitDefender Management Server**
 - automatically performs routine and recurrent activities for a more efficient network management
 - ensures security compliance by applying consistent policies throughout the network
 - manages and controls BitDefender Business Client and other BitDefender server solutions

BitDefender Security for File Servers

BitDefender Security for File Servers is a business security solution especially dedicated to Windows-based servers. Easy to install, configure and manage, it effectively offers world-class protection from viruses, spyware and rootkits, while lowering the burden of administrating a server software solution.

BitDefender Security for Samba

BitDefender Security for Samba provides antivirus and antispymware protection for Samba network shares. By scanning all accessed files for known and unknown malware it keeps network users safe and it helps comply with data protection regulations. Highly flexible, the open source BitDefender vfs module can be compiled against any Samba version, rendering it the ideal choice for your favorite Unix-based system.
