

Install Management Server Integration Support for BitDefender for Windows Servers

Install Server Add-on.....	1
Install BitDefender Security for Windows Servers Products	2
Centralized remote deployment	2
Stand-alone local installation	2

Install Server Add-on

To allow the deployment and management of the BitDefender for Windows Servers products from BitDefender Management Server you have to add the support files for BitDefender for Windows Server products in the BitDefender Management Server.

On the BitDefender Management Server machine, locate the BitDefender for Windows Servers Server Add-on setup file and double click it. This will launch a wizard, which will guide you through the setup process.

Note 1 - *If BitDefender Management Server is installed on a 32-bit machine, locate BitDefender_for_Windows_Servers_Server_Addon(for_32_bit_Management_Servers)_en.exe file*

If BitDefender Management Server is installed on a 64-bit machine, locate BitDefender_for_Windows_Servers_Server_Addon(for_64_bit_Management_Servers)_en.exe file

Note 2 - *You only need to install the server add-on once, then you can deploy the BitDefender Windows Server products*

Install BitDefender Security for Windows Servers Products

There are two ways to install the products:

- Using a centralized remote deployment through BitDefender Management Server
- Using a stand alone local installation of the products.

Centralized remote deployment

Using BitDefender Management Server administration console you can deploy BitDefender Security for Windows Servers products on the wanted servers. For more details about the deployment methods and how to use them, please consult BitDefender Management Server Administration Guide, section "Configuration and Management→Tools" about the deployment methods of the Management Agent.

Note 1 - *BitDefender Management Server can deploy the following Management Agents:*

- *BitDefender Client Security*
- *BitDefender Security for Exchange 2007*
- *BitDefender Security for File Servers*

Note 2 - *If BitDefender Management Server installs a product on a clean machine, it will install the product installation files along with the Management Server integration files.*

If a product is already installed on the target server, BitDefender Management Server will install only the integration files.

Stand-alone local installation

You can install any BitDefender Security for Windows Server product by copying the BitDefender Security for Windows Servers setup file to the desired server and then selecting the products that you want to install. The intuitive wizard will guide you through the setup process.

To centrally manage the product from BitDefender Management Server you will have to use the deployment methods in the Management Server to install the integrations files for the product. For more details about the deployment methods and how to use them, please consult BitDefender Management Server Administration Guide, section "Configuration and Management→Tools" about the deployment methods of the Management Agent.
