

BitDefender Mobile Security provides permanent anti-virus protection for mobile devices running Symbian™ or Microsoft® Windows Mobile™. Relying on the valuable BitDefender experience in fighting computer threats, BitDefender Mobile Security is a light, easy to use instrument that will keep your mobile device on the move.

Why an antivirus for mobile devices?

The threat of viruses infiltrating handheld devices increases as the popularity and functionality of these devices continue to rise. Users and developers realize and further expand the capabilities of these appliances so security tends to be traded for functionality, giving rise to a whole new class of opportunities for malicious attack.

Why BitDefender?

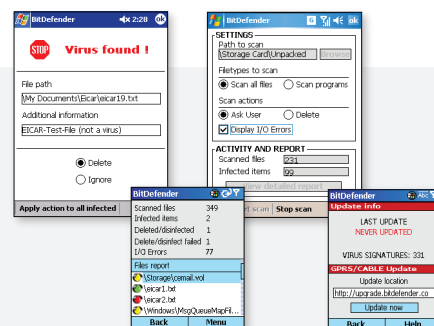

As mobility seems to breed vulnerability, BitDefender steps in with a solution that will keep handheld devices free from harm while on the move. BitDefender Mobile Security provides permanent antivirus protection for handheld devices running Symbian or Microsoft Windows Mobile.

With a direct and practically effortless install, it sets a virus shield at startup and calls for no user intervention at all. The possibility of running on-demand scans, even inside archives, further enhances the protection status of the device.

The antivirus relies on the valuable BitDefender experience in fighting computer threats and on fast and flexible updates that enable a rapid response to virus outbreaks. Mobility being the key word, BitDefender Mobile Security is a light instrument that uses optimized scanning processes to save power.

Key Benefits:

- Permanent antivirus protection
- On-demand scan and virus removal
- Low resources consumption
- Fast updates through GPRS or via PC
- Easy to install and to use

Features

Permanent Antivirus Protection

The virus shield runs at start up and continuously monitors the device, preventing the execution of infected files.

On-Demand Virus Scan

Using the award-winning BitDefender technologies, the product can check the internal memory, memory card or the entire device, removing the malicious files found. The scanning engines are also capable of detecting infected files within common archive types.

Fast, Flexible Updates

The product can be updated either via GPRS from the service provider or from an internet-connected PC. The virus definitions updates are provided by the BitDefender Lab, an industry leader in terms of response time to virus outbreaks.

Engineered for Mobility

Optimized scanning processes provide permanent protection while minimizing resource consumption for a longer battery life.

Easy to Install and to Use

The product can be installed directly to the mobile device, via a mobile Internet connection or via the PC application. The interface is simple and friendly and no user intervention is required while the product is running.

Professional Technical Support

Offered online by qualified support representatives and by accessing an online database with answers to Frequently Asked Questions.

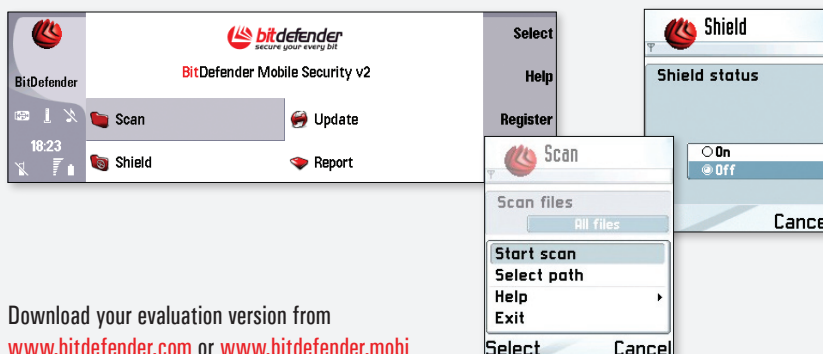

System Requirements:

BitDefender Mobile Security works on the following types of mobile devices:

- Windows Mobile Pocket PC versions 2002 and higher - HP iPAQ 1915, HP iPAQ 3115, Dell Axim x50v, T-Mobile MDA, Qtek S200, etc.
- Windows Mobile Smartphone versions 2002 and higher - Motorola MPx220, Orange SPV C600, etc.
- Symbian™ 60, (7.x/8.x) - Nokia 3230, 6600, 6680, N70, N90, etc.
- Symbian™ 80 (7.x) – Nokia 9300, 9500, etc.

System Requirements for the PC Update Module:

- Microsoft .NET Framework 1.1 (or higher)
- Internet Explorer 5.0 (or higher)
- Microsoft ActiveSync (for Windows Mobile)
- Nokia PC Suite v6.6 or higher (for Nokia devices with Symbian OS)
