

# Centerra Gold digs security with Bitdefender Advanced Business Security

Security for Endpoints delivers 100% availability

## THE COMPANY

Centerra Gold, Inc. is a Canada-based gold mining company that operates, explores, develops and acquires gold and base metals properties in Asia, North America and elsewhere. They are the largest Western-based gold producer in Central Asia, with estimated proven and probable reserves of 16 million ounces of contained gold as of 2017. Headquartered in Toronto, Canada, the company employs more than 3,000 workers worldwide, mostly at remote sites, with an IT staff of approximately 80.

## THE CHALLENGE

Centerra Gold IT staff, in eight sites and five countries, supports end users ranging from office workers who rely on Microsoft Office and other Windows-based applications, to geo scientists who rely on costly, resource-hungry applications that gather, interpret and deliver geological information used in exploration and prospecting.

By 2009, their security software was impacting system performance, slowing laptops and desktops, prompting application crashes, and making troubleshooting complicated and difficult. "We needed a solution that could manage all endpoints anywhere in real time, regardless of endpoint architectures, operating systems (OS), or applications," said Slava Bukhryakov, Lead, Centerra Gold Information Systems and Cyber Security.

The team wanted a solution that provided confidentiality with endpoint security preventing threats from stealing data and eavesdropping and availability, meaning that the endpoint security is not causing issues with the stability of the application or operating system.

"Information Technology should be the enabler of the business, ensuring that everything runs with minimum disruption to the business which translates into availability," Bukhryakov said.

## THE SOLUTION

Centerra Gold chose Bitdefender GravityZone Advanced Business Security with cloud-based management console for its management rules, policy distributions, containment and remediation. They also liked that Bitdefender holds more than 70 patents, including 10 related to

### Industry

Mining, Metals & Exploration

### Headquarters

Toronto, Ontario, Canada

### Employees

3000 (IT staff, 80)

### Challenges

Support a wide range of users on various applications in multiple remote sites with the ability to update endpoints anywhere in real time, ensuring confidentiality, integrity, and availability.

### Solution

After evaluating several solutions, the company chose Bitdefender GravityZone Advanced Business Security with the cloud-management option to centrally manage endpoint security rules, policy distributions, containment, remediation and overall congruency with their own vision for security and protection.

### Results

- Achieved 99.9 percent detection rating
- Achieved 100 percent availability rating
- Protected servers, workstations, and mobile devices
- Supported hybrid bring your own device policy (BYOD)

# Bitdefender®

GravityZone Success Story

unfollow the traditional

machine-learning, anomaly-detection and deep-learning.

"We learned that the Bitdefender solution is so highly regarded in the marketplace that you'll find the Bitdefender engine under the hood of competing solutions," Bukhryakov said.

The single pane-of-glass management console lets them easily manage all endpoints worldwide – and the cloud ensures alerts and reports flow instantly between the management console and endpoints. The company also relies on real-time process monitoring, anti-exploit and anti-ransomware to detect and prevent Advanced Persistent Threats (APTs) and protect against ransomware. "Bitdefender provides our end users the levels of confidentiality, integrity and availability they need – without disruption," Bukhryakov said.

Other benefits to the end-user include Bitdefender's ability to inspect secure browsing (HTTPS) without breaking secure sessions – a challenge with their previous solutions. And, in terms of web control, Bitdefender provides URL categorization and the ability to enforce acceptable use policies – anytime, anywhere – without affecting the browsing experience, and invisible to the end user unless a policy is violated. Centerra Gold can also prevent the download of malware via the HTTPS/SSL channel and can stop it from contacting command and control (C2) using this secure channel.

## THE RESULTS

The IT team is benefiting from Bitdefender's move away from traditional signature-based detection towards machine learning, behavior-based detection and prevention with a focus on advanced exploit techniques and anomaly behavior. With Bitdefender, Centerra Gold achieves a 99.9 percent detection rate and availability across critical features such as the management console, reporting, alerting, and policy management is rated at 100 percent. "Bitdefender had the right idea naming their company – it does a good job protecting every bit of information on your system."

*"We learned that the Bitdefender solution is so highly regarded in the marketplace that you'll find the Bitdefender engine under the hood of competing solutions."*
