Help Found: Cyber Skills Through Managed Detection and Response Services

53%

of IT and cybersecurity professionals report their organization has a problematic shortage of cybersecurity skills.

With the cybersecurity skills shortage continuing unabated year after year, organizations turn to managed detection and response (MDR) services for help. Specialized human acumen and tailored threat data in MDR offerings help reduce the security alert volume faced by security analysts. The best solutions will feature threat data that is curated by a service provider with a long history in threat detection and align that data with customers' industry and market segment requirements in order to take proactive response actions to thwart the adversary.
