MDR Reduces Threat Detection and Response Challenges

76% of IT and cybersecurity professionals say threat detection and response is more difficult today than it was 2 years ago.

Organizations struggle with threat detection and response (TDR) because of the high volume of alerts and the increasing sophistication of attacks. Savvy CISOs turn to managed detection and response (MDR) services to utilize providers’ technical acumen, machine-based detection, and threat curation, and to respond faster. The best solutions will feature services that have high fidelity threat intelligence and take preapproved proactive response actions on behalf of the customer.

Original survey question:
Which of the following responses aligns most closely with threat detection and response at your organization (i.e., threat detection/response processes, tasks, workload, technology operations, etc.)?

Survey respondents:
372 IT and cybersecurity professionals responsible for evaluating, purchasing, and managing threat detection/response products, processes, and services.
