

ThreatConnect & Bitdefender Advanced Threat Intelligence Integration

The Bitdefender Advanced Threat Intelligence integration with the ThreatConnect® Platform allows users to import threat feeds and services into the Platform for triaging, managing, enriching and scoring data from a centralized location.

The solution delivers up-to-date, contextual intelligence on URLs, IPs, domains, certificates, files, Command and Control servers and Advanced Persistent Threats to Security Operation Centers (SOCs), Managed Security Service Providers (MSSPs), Managed Detection & Response (MDR) companies, IT security and investigation consultancy companies as well as large enterprises that need to block ingenious threats.

THE CHALLENGE

As cybersecurity skills shortage continues to be problematic and with the overwhelming number of alerts security operation centers are facing daily, protecting the business is a challenge for most companies globally. These key issues have an increased impact on how security teams can prevent, detect, and respond to external cyberthreats.

THE SOLUTION

Bitdefender is one of the most reputable vendors in cyber-security with over 500+ endpoint deployments and numerous industry awards. The threat intelligence gathered by Bitdefender which is also fed back into its product line to further enhance its capabilities is now available for integration with ThreatConnect Platform.

By integrating Bitdefender threat intelligence, ThreatConnect Platform users gain access to one of the most curated and quality data from the industry covering IPs, domains, URLs and file hashes.

As Bitdefender adds or updates the data exposed as part of the Advanced Threat Intelligence solution, the new information will be automatically visible in the platform without requiring the user to write any code or change the configurations.

HOW IT WORKS

The integration requires the installation of a ThreatConnect app which acts as a middle layer between ThreatConnect and Bitdefender Advanced Threat Intelligence solution. Through the app configuration, the user will have the option to specify:

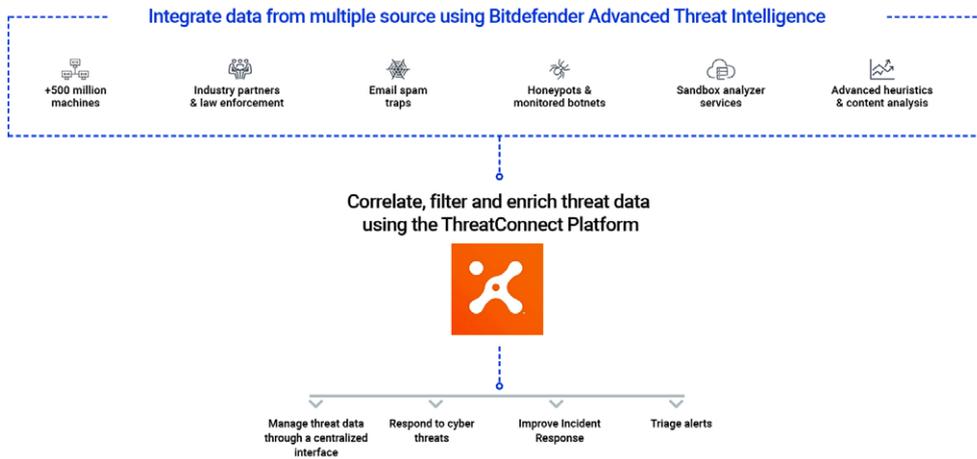

- Credentials for accessing the data provided through Bitdefender intelligence feeds

THREATCONNECT

Designed by analysts but built for the entire team (security operations, threat intelligence, incident response and security leadership), ThreatConnect's intelligence-driven security operations platform is the only solution available today with intelligence, automation, analytics, and workflows in a single platform. Centralize your intelligence, establish process consistency, scale operations, and measure your effectiveness in one place. To learn more about our threat intelligence platform (TIP) or security orchestration, automation, and response (SOAR) solutions, visit www.ThreatConnect.com.

Bitdefender®

- The feeds that should be downloaded from the platform
- The frequency of feeds updates

BENEFITS

- Decrease time-to-value by having an out-of-the box, easy-to-configure integration
- Manage, organize and score threat intelligence from a unified interface
- Stay current with the latest updates in the data feeds without having to change configuration or write software code

FEATURES

- Easy-to-configure interface for threat intelligence
- Direct access to continuously updated threat intelligence curated by our team of 800+ security experts
- Highly accurate data feeds collected from 500+ million sensors globally

GET STARTED:

- If you are already using the ThreatConnect Platform you can easily integrate Bitdefender threat feeds. To find out more information on how to get started, access the Bitdefender integration documentation on GitHub
- If you are interested in using the ThreatConnect Platform, please contact sales@threatconnect.com.

BITDEFENDER

Bitdefender delivers robust security you can rely on. With a global security delivery infrastructure protecting half a billion users, visionary solutions, and a wealth of awards, we have been a trusted security provider since 2001.

Bitdefender works with government organizations, large enterprises, SMEs and private individuals across more than 150 countries. We provide solutions to each of their challenges and needs – and our dedication proves to be successful.

With over 1,600 employees, and a team of 800+ engineers and researchers, Bitdefender is one of the most innovative IT security software vendors in the world today.
