Bitdefender®
Security for Endpoints
Powerfully simple security for your growing business

Bitdefender Security for Endpoints delivers high performing, powerful security, with simplified, centralized management for any number of systems and offices.
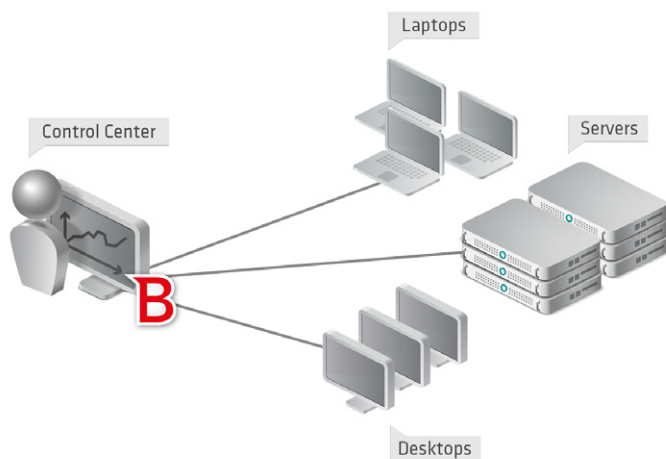

Performance

» #1 rated Bitdefender technologies provide the best protection, performance and usability, as consistently proven by independent tests from AV-Test, AV-Comparatives and Virus Bulletin.

» You gain complete control, by combining industry-acclaimed antimalware technologies with the latest architecture and a powerful, yet intuitive, management console.

Scalable real-time protection

» Bitdefender Security for Endpoints is ideal for companies with a few to many geographically dispersed offices, managed from a single console without added hardware.

» Any number of PC desktops, servers and Macs are protected against malware and web threats

Simplicity

» The solution is deployed without introducing complex or costly infrastructure to your business.

» Our customers report lower operational costs and significant savings in time and effort, based on the new management tools and simple deployment.

» If you prefer the added control of maintaining your security infrastructure in-house, Security for Endpoints is available as an on-premise version.

Our business partners choose Bitdefender for the high performance, advanced innovation, and simple and easy deployment and management.

> "We decided to work with Bitdefender for a number of reasons. The products easily integrate in our Microsoft environment, they detect unprotected endpoints and clean up malware instantly, and the centralized management makes our job very easy. We can structure it in a way that allows us to manage and train our support staff very easily."

Rob Bosch, President, iPremise.

Bitdefender®

Bitdefender Security for Endpoints

Benefits and Key Features

Peace of Mind
- ▸ High protection and performance technology, which allows you to focus on your core business.
- ▸ Antimalware and firewall with Intrusion Detection, centralized real-time control and monitoring, available for both onsite and remote users.

Powerful Control
- ▸ State-of-the-art web console with highly configurable roles and privileges NEW, nested groups and granular policies to better manage the security policies.
- ▸ Auto-detect and scan removable external devices

Costs Optimization
- ▸ The web-based solution provides real-time visibility into the security status and does not require onsite server hardware or maintenance as it is managed by the hosted Bitdefender management console.
- ▸ Web filtering, safety rankings and ability to restrict user access to certain applications or websites are included in the basic offer and not as an upgrade charged extra.

Easy to Change
- ▸ Remote deployment to entire network using Windows Network Discovery and uninstall of competitive solutions
- ▸ Endpoint Security Relay NEW for companies with low bandwidth. Not all computers need to connect to the Internet, the Endpoint Relay can be used to distribute updates internally.

Flexibility
- ▸ Depending on your preference, the endpoint security solution can be implemented as web-based or can be hosted on-premise.
- ▸ To reduce costs, it is recommended to let Bitdefender host and maintain the management components of the solution.

Supported Operating Systems

Security for Endpoints currently protects the following operating systems:

Workstation Operating Systems:
- ▸ Windows 8, 8.1, Windows 7, Windows Vista(SP1), Windows XP (SP3)
- ▸ Mac OS X Lion (10.7.x), Mac OS X Mountain Lion(10.8.x), Mac OS X Mavericks (10.9.x)

Tablet and embedded operating systems*:
- ▸ Windows Embedded Standard 7, Windows Embedded POSReady 7, Windows Embedded Enterprise 7, Windows Embedded POSReady 2009, Windows Embedded Standard 2009, Windows XP Embedded with Service Pack 2, Windows XP Tablet PC Edition

Server operating systems:
- ▸ Windows Server 2012, Windows Server 2012 R2, Windows Small Business Server (SBS) 2011, Windows Small Business Server (SBS) 2008, Windows Server 2008 R2, Windows Server 2008, Windows Small Business Server (SBS) 2003, Windows Server 2003 R2, Windows Server 2003 with Service Pack 1, Windows Home Server

* Specific operating system modules must be installed for Security for Endpoints to work.
